

Course Manager User Guide

One browser page that holds a course: outcomes, delivery, assessment, marks, attainment, evaluation — and every document an accreditation file needs.

CONTENTS

Five parts

- 1 Set up once** — institution, PLOs, thresholds, and where the data lives
- 2 Run the semester** — outcomes, delivery, assessment, marks, attendance
- 3 Read the results** — CLO, PLO, survey and combined attainment
- 4 Close the loop** — evaluation, actions, and the next offering
- 5 File and print** — the documents and the course-file checklist

WHO THIS IS FOR

The **course teacher**. A coordinator or head of department reviews what it produces; an IQAC uses its output as course-level evidence — but everything in it is entered by the person teaching.

ORIENTATION

One page, one course, no installation

IT RUNS IN YOUR BROWSER

Nothing is installed, nothing is transmitted. It works offline — on a laptop, in an exam hall.

ONE DATASET, ENTERED ONCE

Every document is a live view of the same data. The file and your practice cannot drift apart.

YOUR DATA IS YOUR RESPONSIBILITY

Because nothing leaves the machine, backups and file links are yours to manage. Part 1 covers it.

WHAT IT DELIBERATELY DOES NOT DO

No cross-course PLO aggregation, curriculum review, or faculty and facility tracking — those belong to the Self-Assessment Report and the IQAC. No engineering-specific BAETE machinery either: BAC's criteria are general across disciplines.

WHAT IT PRODUCES

Six key documents, five records

DOCUMENT	WHEN	SERVES
Course Outline — UGC Parts A–D	Before the semester; given to students	UGC template · 4.8, 5.4
Course Specifications	Before the semester; to the coordinator	4.8, 5.2, 5.8, 10.3
Final Exam Vetting Form	Before the final examination	5.6
Direct CLO–PLO Calculations	After marking	4.8 (iv)
Course Evaluation Survey	Last week of teaching	10.2
Course Report	End of semester; to the coordinator	4.8 (iv), 10.2, 10.3
Plus five records: alignment · attendance & make-up · timely feedback · teacher's statement · course-file checklist		5.2, 5.3, 5.5, 5.8

PART ONE

Set up once

Institution, programme outcomes, thresholds, grading scale — and the decision about where your data actually lives.

SETUP · ONCE, BEFORE THE FIRST COURSE

Six fields that print everywhere

- | | | | |
|----------|---|----------|---|
| 1 | Institution & POE — name, faculty, department, degree and BNQF level | 4 | Programme Learning Outcomes — your own list, any number, each with its BNQF domain |
| 2 | Logo — uploaded once, printed in grayscale on every document | 5 | Default thresholds — inherited by every new course |
| 3 | Signatory titles — head, coordinator, moderation chair, IQAC | 6 | Grade scale — keep the range wording, e.g. 65% to less than 70% |

THE FRAMEWORK

Four BNQF learning-outcome domains

FUNDAMENTAL

Discipline knowledge and the application of skills.

SOCIAL

Working with people, communication, community engagement.

THINKING

Learning to learn, decision-making, problem solving, critical thinking.

PERSONAL

Life-long learning, self-direction, integrity, citizenship, teamwork.

A single course need not touch all four. The programme as a whole must.

Where your data lives

OPTION	WHAT IT MEANS	USE IT WHEN
This browser	Always active; survives a reload. Lost if browser data is cleared, and it does not follow you to another computer.	Never rely on it alone
A file on this computer	Work on a <code>.json</code> file the way Word works on a <code>.docx</code> — every change auto-saves. Chrome or Edge, desktop.	One teacher, one machine
Google Drive	The same file in your Drive, synced seconds after each change, reachable from any machine.	Two machines, or a backup you cannot forget

Ctrl+S (⌘S) flushes everything now. Closing with unsaved changes warns you first.

ONCE PER INSTITUTION

Setting up Google Drive

- 1 In Google Cloud Console, **enable the Google Drive API**
- 2 Credentials → **OAuth client ID** → type **Web application**
- 3 Add this page's address as an **authorized JavaScript origin**
- 4 Paste the Client ID into **File ▶ Set up Google Drive...**
- 5 Use **Save to Google Drive as...** or **Open from Google Drive...**

TWO LIMITS

Drive needs a real web address — it cannot authenticate a page opened from disk. And CM asks only for the `drive.file` scope, so it sees nothing but files it created or you opened through it.

IF THE FILE CHANGED ELSEWHERE

The chip turns red and reads **conflict**. Choose **Keep mine** or **Load the Drive version**. CM never merges — you decide which is authoritative.

DATA & BACKUP

Export anyway

1

JSON FILE — EVERY COURSE, SETUP AND LOGO

2×

EXPORT EACH SEMESTER, AND AFTER EVERY MARKS SESSION

IMPORT VS MERGE

Import backup replaces everything. **Merge courses** adds only courses you do not already have — the safer choice when collecting files from colleagues.

WHY IT MATTERS BEYOND YOU

The JSON export is the form a department needs if course data is consolidated for accreditation reporting.

PART TWO

Run the semester

Outcomes and mapping, delivery and learning time, the assessment plan, marks and the class record.

RHYTHM

The semester at a glance

WHEN	WHAT YOU DO	WHERE IN CM
Before teaching	Course identity; act on the last report; CLOs, mapping, activities, hours, weekly plan, assessment plan	Course Info · CLOs · T&L · Assessments
	Hand out the Course Outline ; submit the Course Specifications	Documents
While teaching	Log every session, cancellation and make-up; record dates held and results returned; enter marks	Attendance · Assessments · Marks
Before the final	Moderate the paper; run the student survey	Vetting Form · Survey
After results	Read attainment; write the evaluation and next offering's actions; print	Attainment · CQI · Documents
Next offering	Duplicate — the report's actions arrive as your new inputs	Dashboard

COURSE INFO

Two numbers govern every result

HOW A CLO IS JUDGED

A **student** attains a CLO when the marks obtained on the items tagged to it reach the **pass mark** — 40% by default — of the marks allocated to that CLO.

The **CLO** is attained when the share of assessed students who attained it reaches the **target** — 50% by default.

THE OTHER TWO FIELDS

The direct/indirect split (80% marks / 20% survey) and the survey rating that counts as attainment (4 of 5).

SET THEM BEFORE MARKING

Changing a threshold afterwards silently re-computes every figure you have already circulated. If one must change, say so in the Course Report.

CLOS & MAPPING

Write outcomes you can actually assess

One sentence naming something a student can be **seen to do**

Choose the Bloom's level and the BNQF domain it develops

The UGC template suggests **3–5 CLOs** ; CM flags a course outside that range

CM warns on *know, understand, learn, be aware of, appreciate* — advice, not a lock

INSTEAD OF

“Students will understand research ethics.”

WRITE

“Evaluate the ethical implications of a proposed research design and justify the safeguards chosen.”

The second names the performance, the evidence and the level.

CLOS & MAPPING

Map honestly, not generously

HOW TO MAP

Click a cell to cycle the strength: blank → **1** low → **2** medium → **3** high. Hover a PLO code for its statement.

MAPPED TO NOTHING

A CLO mapped to no PLO contributes nothing at programme level, however well the class performed.

MAPPED TO EVERYTHING

Mapping “to be safe” dilutes the programme picture — and is the first thing a reviewer questions.

The domain-coverage panel below the matrix shows which BNQF domains your outcomes really develop.

T&L

Activities, learning time, weekly plan

ACTIVITIES PER CLO

Tick what will develop each CLO — hover any for a classroom tip. Every CLO needs at least one: the alignment record and the teacher's statement depend on it.

NOTIONAL HOURS

Lecture, tutorial, lab, independent study, assessment preparation — per CLO. CM compares the total against roughly **40 hours per credit** and flags a gap over 15%.

WEEKLY PLAN

Topics, the CLOs each week serves, activity and hours. A CLO with no week is a planning error, not a rounding one.

ASSESSMENTS

The tag that turns a mark into evidence

FIELD	WHY IT MATTERS
Weight %	Should total 100% across all assessments; CM shows the running total
Date held / feedback given	Criterion 5.5 wants results returned in time — CM flags a gap beyond two weeks
Rubric shared in advance	Criterion 5.4. Tick it only when the rubric exists and students have seen it
Item ▶ CLO	The critical field. An untagged item's marks count in the class total but reach no CLO
Item ▶ Bloom level	Feeds the higher-order-thinking share (Criterion 5.1) and the vetting form
Item ▶ Max marks	The denominator when CM judges that CLO

A CLO carrying no marks is reported in red — Criterion 5.2(v) has you certify that all CLOs were assessed.

The raw evidence, and the class record

MARKS

Paste the class from a spreadsheet, or use the **empty CSV template** — CM writes the exact headers it will accept back. Marks save as you type and are capped at each item's maximum.

A BLANK IS NOT A ZERO

A blank means “not assessed”: a student with no marks against a CLO is excluded from it, not failed. Partial data looks like a smaller cohort, not poor performance.

ATTENDANCE

One row per session: date, kind, topic, present, cancelled, make-up, and the reason or notice issued.

Record the approved routine reference at the top — Criterion 5.3 expects the routine, the attendance record and the make-up record together. Head-counts are enough for the printed summary; signed sheets stay in the physical file.

PART THREE

Read the results

Direct attainment from marks, contribution to programme outcomes, the student survey, and the two properties that surprise people.

ATTAINMENT

Four views of the same cohort

CLO — DIRECT

From marks: allocated, assessed, attaining, class average, verdict against target. Bars below target are red.

PLO CONTRIBUTION

The mapping-weighted average of its CLOs, so strength 3 counts three times strength 1. A course only *contributes*.

STUDENT SURVEY

Respondents and counts per rating, CLO by CLO, plus course feedback means and your summary of open answers.

COMBINED

Weighted 80 / 20 by default. A CLO with no survey data keeps its direct value rather than being penalised.

Student ratings are good evidence about experience and workload, weak evidence about learning. That is why they are weighted at 20% rather than averaged in — and why the report asks you to **comment** on them.

WORKED EXAMPLE · CLO2, 37 MARKS ALLOCATED, 18 STUDENTS, 40% PASS, 50% TARGET

The arithmetic, once

STEP	CALCULATION
One student's CLO2 score	$6 + 4 + 5 = 15$ of 37 → 40.5% → at or above the pass mark → attained
Direct CLO attainment	8 of 18 students reach 40% → $8 \div 18 = \mathbf{44.4\%}$ → below target → not attained
Survey (indirect)	11 of 18 respondents rated CLO2 at 4 or 5 → 61.1%
Combined (80 / 20)	$(0.80 \times 44.4) + (0.20 \times 61.1) = \mathbf{47.7\%}$ → still below target
Contribution to a PLO	CLO2 at strength 3 (44.4%) and CLO4 at strength 1 (72%) → $(3 \times 44.4 + 72) \div 4 = \mathbf{51.3\%}$

READ THIS TWICE

Two properties worth internalising

Attainment is a headcount, not a class average.

A cohort can average well and still miss the target if the marks are concentrated in a few strong students.

The pass mark applies per CLO, not to the course total.

A student can pass the course while failing an outcome — which is precisely what makes CLO-level reporting useful.

PART FOUR

Close the loop

One loop, carried by two linked tables — and the discipline of actually using what the last report recommended.

CQI

One loop, two linked tables

Four rows in each table: the **CLO loop** and the **PLO loop** , each by direct measurement and by survey. One shared dataset — edit it in the CQI section, in the printed document, or in the inputs card.

THE SECTION, TOP TO BOTTOM

1 · recommendations received · 2 · what the evidence says · 3 · the teacher's evaluation · 4 · action plans for next time, with **Draft from the evidence** to seed a line per outcome below target.

CRITERION 10.3

Storing recommendations is not using them

The previous offering's recommendations appear in a **CQI Inputs** card at the top of **T&L** and **Assessments** — the two sections where you revise the course

Each has a “**Reflected in this offering**” cell to fill in

Activities you judged ineffective last time are listed, so they are reconsidered rather than re-adopted out of habit

Until every recommendation has a response, the Dashboard flags it and the T&L step stays **pending**

A GOOD ACTION NAMES FOUR THINGS

The outcome · the number that triggered it · what changes in teaching, assessment or preparation · when.

“CLO2 attained by 41% against a 50% target — add two tutorials of worked analytical examples before the mid-term, next offering.”

A recommendation that cannot be checked next time is not an action.

DUPLICATE FOR NEXT OFFERING

What travels, what starts clean

CARRIED OVER

CLOs, PLO mapping and domains; activities and notional hours; the weekly plan; the assessment plan; textbooks, facilities, thresholds and Setup.

Course Report 6.1 becomes the new Course Specifications 6.1, and ineffective activities carry as a caution.

CLEARED

Students and marks; attendance; survey responses; moderation; the teacher's statement; the report's comment fields; actual hours; assessment and feedback dates; the file checklist.

Then set the new semester in Course Info — and start in the CQI Inputs card.

Do not use it to “clear” the current offering. The current one is your record.

PART FIVE

File and print

Live views of your data, printed as UGC and BAC prescribe — plus the packing list for the physical file.

DOCUMENTS

What you type on the page itself

DOCUMENT	TYPED ON THE DOCUMENT
Course Outline	Year/level; contact hours and total marks (pre-filled, typed only to override); marks distribution; the assessment and co-curricular columns; assessment strategy; make-up procedures; readings; the prepared / checked / approved block
Course Specifications	Submission date; final-examination hours; §6.1 recommendations and responses; §6.2 other modifications
Final Exam Vetting Form	Moderation date, members, external member, observations — the question analysis, CLO coverage and Bloom share are computed
Calculations · Survey	Nothing. One is entirely computed; the other is the blank instrument
Course Report	CLO modifications; actual hours and reasons for variation over 25%; activity effectiveness; resource adequacy; the comments; §6.1 actions; the head's approval

Dotted fields save immediately. **Print / Save as PDF**, or **Export for Word** when a document must be merged into a departmental template.

COURSE FILE CHECKLIST

The packing list, in two tables

A · UGC TEMPLATE FOR COURSE FILE

Twelve items — including peer review as Done / Not done — each naming where CM produces it, with a tick box and a remarks field. A row marked **ready** is already complete inside CM and only needs printing.

B · WHAT BAC EXPECTS BEYOND THAT LIST

Specifications · alignment record · signed routine · make-up notices · tutorial records · feedback record · vetting form · lab log book · marks sheet · teacher's statement.

WHAT CM CANNOT PRODUCE — AND DOES NOT PRETEND TO

Lecture materials · sample scripts at high, medium and low performance · the question papers themselves · signed attendance sheets. Those you file by hand.

WHEN SOMETHING LOOKS WRONG

The six most common causes

SYMPTOM	CAUSE AND REMEDY
A CLO reports 0%, but the class did well	No item is tagged to it, or no marks entered — check the marks-distribution card
Attainment looks oddly high or low	The pass mark or target is not what you assumed, or marks are only partly entered
The grade distribution shows dashes	Setup grade rows lack readable ranges — use 65% to less than 70%
Drive does nothing	No Client ID, the page is opened from disk, or this origin is not authorized on the OAuth client
The chip says “reconnect”	Browsers drop file permission between sessions — click it and grant access
Everything disappeared	Browser data was cleared, or this is a different browser or profile. Import your last JSON backup

IN ONE LINE

**Enter it once. Teach, measure,
improve. Print the file.**

The full guide — including the criterion map, the glossary and 35 references behind CM's design — sits in the app's **About** section and in the printable User Guide.
